(54) MAKEUP COSMETIC

(57) Abstract:

PURPOSE: To provide the titled cosmetic having excellent water-resistance, oil-resistance and abrasion resistance, and excellent stability with time, and handleability, by using a silicone resin having three-dimensional network structure as a film-forming component.

CONSTITUTION: A film-forming component containing a silicone resin having a three-dimensional network

structure or capable of forming said structure, is used as a component to obtain a makeup cosmetic, especially a non-aqueous eye-makeup cosmetic. The above silicone resin can be prepared e.g. by hydrolyzing an organic trichlorosilane and an organic dichlorosilane, and condensing and crosslinking the hydrolyzed product. It is compounded to a makeup cosmetic in the form of a silicone varnish prepared by dissolving the resin of the initial stage of polymerization in a volatile solvent or oil or a silicone oil prepared by mixing with a dimethylpolysiloxane having a viscosity of $\geq 100,000$ cs.
